SUPERMAXX SPORT

MA-SP

The Supermaxx Sport offers a massive 30% improvement over its predecessor in life, grip and handling.

- New dual compound high density full silica tread giving 30% more mileage
- New progressive steel spiral belt with high density at the top of the tread for mileage, moving to mid-density as you lean, to low density at full lean giving a bigger contact patch throughout any turn giving reliable cornering with grip and stability
- High drainage tread pattern for wet days
- Reinforced tread grooves increase the tyre stiffness for stability

- Spiral steel belt for straight-line stability
- Progressive spiral belt for a larger contact patch when cornering
- Dual compound rear tyre for improved grip and long life
- Highly-dispersed full-silica compound for extreme grip and traction

RIDE *MIGRA*

CM-S1

CST has finally entered the radial tyre market with the Ride Migra. CST's first Sports Touring tyre is what you would expect from the largest producer of motorcycle tyres in the world. Developed over many years drawing experience from our sister company Maxxis and working with OE (Original Equipment) manufacturers the Ride Migra is a perfect blend of balance, grip and performance demanded by today's rider.

Our test riders, ex BSB Champions were amazed at the level of grip and they were unable to break it when testing.

- Excellent high-speed stability
- Flexible manoeuvrability and outstanding stability when cornering
- Perfect performance, both in the wet and dry
- Superb ride comfort, ideally suited to sports touring motorcycles
- Radial construction for low fuel consumption on long journeys

ROAD

Classic

M6011

Maxxis is proud to re-introduce the acclaimed black-wall classic line up after a make-over. Designed to fit and forget, the range offers a deep tread for great mileage and water evacuation on a tread compound specially designed for heavy cruisers, on top of a high density carcass that holds its shape through the full turn on the heavy cruisers.

- Specially formulated compound and matched front/rear tread pattern provide excellent traction and durability in dry and wet weather
- Deep offset tread grooves channel water away from the contact patch
- Additional stability is provided by the offset centre rib
- Built for heavy bikes
- Comfortable, reliable touring tyre

MAGSPORT

C6501/C6502

The Magsport is a high-performance bias ply street tyre. The matching front and rear tread pattern offer improved handling at higher speeds.

This new generation of H-rated tubeless street tyre features a modern pattern that led rainwater away from the contact patch, this improves grip levels offering higher safety characteristics.

Ideal tyre for the modern middle / lightweight commuter.

- Matched front and rear patterns for a variety of road conditions
- Aggressive shoulder tread ensures cornering confidence and rapid water dispersal
- The Magsport tyres offer excellent ride comfort and stability

RIDE **AMBRO**

CM-A1

The Ride Ambro CM-A1 has been developed to provide excellent road comfort and stability on small adventure bikes needing H-rated tyres to medium and large adventure bikes fitted with or without luggage.

The premium tread compound delivers perfect performance on wet or dry surfaces with incredible mileage wherever the journey goes. The CM-A1 is an adventure, multi-directional tyre designed to offer excellent grip on difficult trails with minimal tyre wear.

- Wide, deep grooves for excellent water dispersal and improved wet riding
- Asymmetrical tread pattern to ensure stability and minimal tyre wear
- Large tread blocks for effective grip and stability on sand, rocks and roads

RIDE **AMBRO**

CM-A3

The Ride-Ambro CM-A3's all new fish scale tread has been designed to offer a 70/30 road/off-road balanced tyre. The tyre is at home on the road offering high-speed stability and comfort or in the mud with great traction.

The tread has been designed with grip and water evacuation in mind with the large blocks offering a perfect balance of traction in mud and sand as well as balanced feel on the road.

- Single steel spiral construction enhances high-speed stability
- Nano-Silica compound improves grip in the wet
- Grooves arrangement guarantees great traction and water/mud dispersal

CM-AD01

The new CST CM-AD01 is a new rugged adventure tyre for today's small to medium adventure bikes. The hard looking tyre perfectly offsets the modern styling of many new bikes.

At home on the road, you can also take the CM-AD01 off road with its upgraded tread compound enhancing its resistance to cutting. The 70/30 road/off-road pattern allows a rider to choose the best tyre for their bike.

The square tread blocks deliver excellent water evacuation, with traction and grip when needed in either mud or sand for those ventures off road.

- Large, crossed, central block pattern provides excellent traction and riding stability, for on and off-road use
- Classic lug pattern block ensures cornering stability
- Special sipes on the grooves improve mud and debris ejection
- Upgraded compound delivers great grip and wearing durability

SCOOTER

CM-SC01

The maxi-scooter tyre has been redefined by the new CM-SC01. Safety and performance are at the heart of the new silica compound that has been balanced to provide semi-racing compound for today's range of scooters reaching up to 130mph.

- Semi-racing compound delivers excellent grip in the dry or in the wet
- New balanced carcass delivers straight line stability and unrivalled cornering performance
- Built for Maxi-Scooter
- A balanced tread pattern cuts through water to deliver grip on the road.
- Silica compound delivers good mileage

OFF-ROAD

MAXXCROSS MXST+

M7322F/M7332R

The Maxxcross MXST+ is a dual compound championship-winning, race-specification motocross tyre designed to deliver the fastest lap times on mid-soft terrain. The offset tread design was the first of its kind, designed to deliver immense traction to the rear wheel right off the gate through to the end of the Moto. The enhanced lightweight pliable carcass improves ride comfort, impact absorption and the all-important rider feel.

- Dual Compound tread pattern delivers bite and grip
- Extremely lightweight MX tyre for maximum speed
- Designed for immediate traction off-the-gate
- Incredibly precise front tyre for immense handling and predictability
- Race specific compound
- Tyre sizes available for kids' and adults' motocross bikes
- Excels in mid-soft terrain
- Championship-winning (MXGP, MXGB and MX Nationals) tyre

Use with **RIGACOMME** Mousses for best results – see page 31

"After testing the MaxxCross tyre range back to back with other brands our decision was easily made with the level of grip and trust we had from the tyres, and we are sure to have the edge over our competition."

Shaun Simpson

OFF-ROAD

"Before moving to Maxxis, Neil Prince carried out blind tests pitting Maxxis v their old tyre and he was amazed at the results. MX1 rider Josh Gilbert (right) came in after one such session to find he was 1.5 seconds per lap faster than the previous tyres the team used."

Neil Prince

MAXXCROSS MXSM

M7328

MXSM is designed for sand and mud and to pair with the MX-ST front for the ultimate championship-winning pairing.

- Enhanced rigidity 'scoop' design for extreme grip from the gate
- Prominent half-shoulder knobs for grip during sharp corners
- Scoop aids in propelling through sand and mud
- Hydrophobic rubber for self-cleaning properties
- Designed to operate consistently across a huge range of temperatures
- Sharp block edges for intense grip
- Reinforced sidewalls for rider comfort

BITE MX

CM733/CM734

When the gate drops and you're aiming for the holeshot you need tires that give you the edge over your opponents. The new CST CM733 and CM734 tyres deliver performance, durability, safety and comfort – all at an affordable cost.

- Tread blocks in central area help release mud for better cornering traction and stability
- Sipes in the tyre blocks supply excellent grip and traction on soft terrain
- Multiple side-by-side rows of tread blocks provide high levels of lateral traction
- Large shoulder tread blocks offer exceptional cornering stability

RIGA GOMME

NOT JUST ANOTHER MOUSSE BRAND

World Championships winning mousses across different disciplines of Offroad motorcycle racing. Whether it's Enduro, Extreme Enduro, Offroad or Rally, we've got a mousse for the job. Riga Gomme is premium off-road motorcycle mousses from Italy. The company was founded in 1955 to deliver premium products to the demanding Italian riders, in 2015 Riga Gomme started manufacturing its own mousses and quickly became known as one of the best mousses to use as can be seen by the multiple World Championships. The Maxxis MX-ST+, MX-SM and MX-HD have been developed using Riga Gomme mousses.

WinX Mousse

Commonly used on the enduro circuit in extreme conditions mousses are now becoming more popular on the motocross scene where race finishes count. The mousse system replaces the conventional inner tube and is manufactured from a foam material to replicate the feel of a inner tube without any sacrifice in grip or tyre performance. To enable Winx Mousses to perform at their best, we recommend they be used within 12 months of the manufacturing date.

VALVES FOR TUBELESS TYRES

Order #	Description	Per
2901001	TR412 – 33 x 11.5 mm (0.453") snap-in type	1
2901002	TR413 – 43 x 11.5 mm (0.453") snap-in type	1
2901004	Straight chrome 8 mm Ø clamp-on type	1
2901005	Straight chrome 11.5 mm Ø clamp-on type	1

VALVE EXTENSION

Order #	Description	Per
2911003	90° angled bend	1

VALVE CORES

Order #	Description	Per
2915001	Short type valve cores	4

VALVE CAPS

Order #	Description	Per
2915004	Key type valve cap	4

TYRE PUNCTURE REPAIR KIT

Order #	Description	Per
2941010	Tubeless tyre puncture repair kit containing three CO ₂ canisters, tools, rubber inserts & carrying pouch. Instructions for use printed on type	1
2941004	Weldtite Cure-C-Cure motorcycle puncture repair kit for tubed tyres	10
2941014	JETVALVE 3 X CO ₂ cylinders 16g	
2941024	JETVALVE CO ₂ inflator(head/cylinder/sleeve)	
2941031	Self-seal patch kit-singles	

SPOKE WRENCH

Order #	Description	Per
5854921	Open ended suitable for 5.7, 5.8, 6.1, 6.4, 6.7 & 6.9mm nipples	

TYRE LEVERS

Order #	Description	Per
5864956	Italian made levers in carbonium steel. 175 mm long. Specially designed for use on mopeds and step-thrus type	3
5864959	Carbonium steel levers suitable for streetbikes 200 mm long type	1
5864960	Carbonium steel levers (as 5864959) with spoke hook, supplied in plastic wallet	3
5864962	Chrome vanadium levers suitable for off-road bikes. 240 mm long type	1
5864963	Chrome vanadium levers (as 5864962) with spoke hook, supplied in plastic wallet	3
5864965	Nº 9 spoon type 7" long	6 pair
5864968	Chrome vabadium levers for workshop use. 350 mm long	1
5864985	Nº 7 flat type 9" long	6 pair
5864990	Spoon type 12" long	1

TYRE CHANGING TOOLS

Order #	Description	Per
5920021	Bike Workshop motorcycle tyre bead breaker JL-C03009 15"-21" wheel	
5920022	Bike Workshop tyre changer JL-C03003 15"-21" wheel	
5920023	Bike Workshop tyre changer JL-C03006 6"-21" wheel	
5920024	Bike Workshop tyre changer JL-C03001 8"-16" wheel	

TOOLS & ACCESSORIES

SPOKE WRENCH SET

This BS5502/3 tool comes with two sets of ends to fit various sizes of spoke nipples. One set is silver and made from aluminium and coloured silver. They are used for torquing spoke nipples to a fixed setting when installing. When that torque setting has been reached, the wrench clicks to indicate this.

The tool also has a second set of ends which are coloured black and made from steel - these are used for removing rusted spokes as they have a greater strength. The other end of the tool is used with these which does not have any torque setting.

Order #	Description
5805502	BIKESERVICE TOOLS 22PC SPOKE WRENCH SET w steel and aluminium ends
5805503	BIKESERVICE TOOLS 22PC SPOKE WRENCH SET w steel heads

TYRE LEVER

Drop forged and tempered alloy steel. Designed for motorcycle tyre removal.

Order #	Description
5809953	280mm (11")
5805603	200mm (8")
5805604	400mm (15¾")

CURVE TYPE TYRE LEVER

Order #	Description
5805612	350mm long, curved handle to improve torque

3PCS RIM PROTECTOR SET

Protects wheel rims from damage during tyre removal.

Order #	Description
5809952	Overall length 150mm

MULTI-FUNCTIONAL TYRE VALVE TOOL

4-in-1 function:

1. Valve installer and remover
2. Pressure release
3. Valve core installer
4. Valve thread chaser

Order #	Description
5809952	Multi-functiona tyre valve tool

TOOLS & ACCESSORIES

TYRE BEAD HOLDING CLAMP

Designed to push and hold the bead down into the centre of the rim during installation and repair of off road tyres. Assists with using tyre levers to remove tyres. Plastic screw protects rim.

Order #	Description
5805610	Tyre bead holding clamp

TYRE VALVE EXTRACTOR BAR

Steel bar with movable rubber sleeve offers maximum leverage during removal of snap-in valves. Prevents damage to alloy wheels.

Order #	Description
5803699	Tyre valve extractor bar

DIGITAL TYRE PRESSURE GAUGE

Angled nozzle fits all types of motorcycle valves.

Calibration in Bar, kPa and PSI at the push of a button for unit change. One hand operation, accurate digital LCD reading. Auto Power off, low power consumption.

Measuring range 2-100 PSI (0.15 - 7.00 Bar)

Resolution 0.5 PSI (0.05 Bar or 5 kPa)

Accuracy +1% +0.5 PSI.

Operating temperature 10°C - 30°C/50°F - 86°F.

Power 3V Lithium battery.

Order #	Description
5803238	Digital tyre pressure gauge

3-in-1 FUNCTIONS TYRE PRESSURE GAUGE

Function includes checking and lowering tyre pressure and checking tyre depth.

45° head for convenient valve access.

Tyre pressure checking range: 0-50 PSI / 0-350 kPa.

For tyre tread depth 0-10mm / 0-32 unit (1/32")

Order #	Description
5803211	3-in-1 functions tyre pressure gauge

TECHNICAL INFORMATION

TYPES OF TYRE

There are three tyre construction types:

- diagonal cross-ply
- radial ply
- bias belted

These may be:

- tubeless (no tube required) or
- tube type (requiring inner tube)

All three construction types are manufactured in several tread profiles. Tread patterns and profiles are available for front and rear positions.

Special tyres are available for sporting events, some of which are unsuitable for road use and are marked accordingly (normally NHS - Not for Highway Service).

REGULATION MIXING OF TYRES

The intermixing of radial, bias belted and diagonal cross-ply tyres has legal requirements and motorcyclists are advised to consult the Motor Vehicles (Construction and Use) regulations obtainable from Her Majesty's Stationery Office.

Recommended fitment:

- 1 Diagonal cross-ply front and rear
- 2 Diagonal cross-ply front and bias belted rear
- 3 Diagonal cross-ply front and radial rear
- 4 Radial front and rear
- 5 Bias belted front and rear

Illegal fitment:

- 1 Radial front and diagonal cross-ply rear
- 2 Bias belted front and diagonal cross-ply rear
- 3 Radial front and bias belted rear

TYRE LOAD AND SPEED MARKINGS

Radial, bias belted, and diagonal cross-ply tyres have markings to indicate their load and speed capabilities.

It is important that tyres are suitable for the maximum speed capability of the motorcycle. In some overseas countries this is a legal requirement.

Tyre speeds are shown in accordance with an alphabetical list of symbols indicating speeds at 10 km/h increments.

The relevant speed symbol is positioned near the size designation in conjunction with a load index: e.g. 120/90-18 65S, where '65' is the load index and 'S' the speed symbol. In the case of speed symbols 'V' and 'ZR', these are shown within the size designation, e.g. 120/90-V18. The size designation for 'V' and 'ZR' normally omits the load index. Details of speed symbols and load indices are shown in tables 1 and 2.

WATCH YOUR TREAD

Tyre treads are designed to give good wet grip but the road surface condition plays the major part in tyre to road adhesion. In general, wet grip decreases as tyre tread patterns wear down or as the depth of surface water increases. Motorcyclists should take this into consideration and reduce speed when it is wet.

The legal limit of tyre tread depth in the UK for motorcycles over 50 cc is 1 mm across $\frac{3}{4}$ of the width of the tread pattern and with visible tread on the remaining $\frac{1}{4}$. For motorcycles up to 50 cc the law requires that all the grooves of the original tread pattern must be clearly visible. The legal requirements may differ in other countries.

SAFETY AND MAINTENANCE

Inflation pressures must be checked at least once a week. They should be checked only when the tyre is cold, since there is an increase in pressure when the tyre has warmed up after being run. A reliable pressure gauge should be used.

The recommended inflation pressures are vitally important for safe handling of the motorcycle. Pressures must be adjusted appropriately for solo and for pillion and pannier loads. It is dangerous to re-inflate a tyre which has been run flat or seriously under-inflated. Such tyres should be removed for inspection by a tyre specialist.

Tyres should be examined regularly, removing stones and other objects embedded in the tyre. Oil or grease should be removed with a suitable diluted detergent.

Lumps or bulges could indicate internal damage and should be examined by a tyre specialist without delay.

AGE DETERIORATION

Tyres can deteriorate with age which shows as cracking of the tread and sidewall rubber, sometimes accompanied by carcass deformation. Cracking is usually an indication that tyres have been in service for an extremely long time, but rubber deterioration may be brought about by poor storage conditions. If cracking is severe, the tyre must be replaced.

TUBES

Ensure that the correct size and type is fitted and that the valve stem tightly fits the hole in the rim. Always use a new tube when fitting a replacement tube type tyre or a tubeless tyre requiring an inner tube.

Tubes which are stretched, thinned or excessively repaired may deflate without warning and should not be re-fitted.

Tubes must always be used with tyres fitted to wire spoked wheels, irrespective of whether the tyre is tubeless or tube type, except for those wire spoked rims specifically designed for tubeless tyres. A rim band or a rim tape of the correct type must be fitted to protect the tube from spoke head damage.

Inner tubes of the correct size may only be used with tubeless tyres if correctly fitted and approved by the individual tyre manufacturer. It must, however, be emphasised that the result of fitting tubes in tubeless tyres is that, in the event of a puncture, the assembly will behave in exactly the same way as a tube type tyre and tube assembly, i.e. it is likely to lose pressure more rapidly than a tubeless tyre assembly.

Where tubes for certain low profile tubeless tyres are not available, an alternative size tube should not be fitted.

Tyres which are marked 'Tube Type' or are not marked 'Tubeless' must be fitted with an inner tube.

VALVES

A new valve should be fitted when replacing tubeless tyres. When checking or adjusting inflation pressure always ensure that the valve is not leaking.

The fitment of a valve core with a steel spring is necessary for high speed usage. Particular care must be taken to ensure that the valve is the correct size and type for the rim.

When a tube is fitted and the rim valve hole is designed for a rubber snap-in tubeless valve, it will be necessary to fit an adapter collar or skirted lock nut to ensure correct valve location. Always fit a valve cap, preferably of the sealing type.

REPAIRED TYRES

Repairs to motorcycle tyres and tubes must be carried out in accordance with current BS AU159 standards and should, therefore, be entrusted to a specialist.

All punctured or damaged tyres must be removed from the wheel for internal and external examination to ensure there is no hidden damage which would cause a later failure.

In order to avoid such a hazard, neither externally applied plug tyre repairs nor liquid sealants are recommended and tyre manufacturers cannot be responsible for problems resulting from their use.

WHEELS AND RIMS

It is essential that the wheel size and type is a suitable fitment for the tyre and motorcycle concerned (see table 3).

Tyres must not be used on damaged or distorted wheels since this could result in tyre damage and deflation.

Car and motorcycle rims of the same nominal diameter have different dimensions and therefore car and motorcycle rims and tyres must not be inter-changed.

REMOVAL AND FITTING OF TYRES

These operations should be entrusted only to a tyre specialist who has the necessary equipment and expertise. Improper fitting can result in damaged tyres and wheels. Direction arrows, where shown on the sidewall, indicate the direction of rotation of front and rear tyres and must not be ignored.

GENERAL

Driving over pot-holes, kerbs or other obstructions, even at low speeds, can result in the weakening or fracture of the casing structure.

E-MARKING

Motorcycle tyres will be supplied in accordance with 'The Motor Vehicle Tyre (Safety) Regulations 2003'.

TABLE 1: TYRE SPEED MARKINGS

Speed Symbol	Maximum motorcycle speed for which the tyre is suitable	
	km/h	mph
Moped (B)	50	30
F	80	50
J	100	62
K	110	69
L	120	75
M	130	81
P (or -)	150	95

Motorcycle tyres are manufactured in a number of different countries with differing requirements in terms of load, dimensions and speed ratings. This has resulted in various size markings. This chart gives a guide to the relationship between various size markings.

THIS CHART DOES NOT IMPLY EXACT COMPARISONS.

TYRE ASPECT RATIO

SIZE MARKINGS

There are essentially three types of size marking used for motorcycle tyres:

- 1 Imperial
- 2 Imperial Low Profile
- 3 Millimetric

All of these systems describe the width (W), height (H) and rim diameter (dr) of a tyre size.

The Tyre Aspect Ratio drawing (on page 6) shows where these dimensions are measured from and the overall diameter (D).

The height of the tyre and hence its overall diameter (D) is controlled by the Aspect Ratio (Ar).

Tyre sizes for all motorcycle tyres, except those for specialised non-road legal applications, (pure racing tyres, ATV tyres, etc.) are expressed as:

Width/Aspect Ratio	Construction or Speed Symbol	Rim diameter dr
W/R		

For older Imperial sizes the Aspect Ratio is 100% and not shown.

For example:

3.50 x 18 = 3.50" wide, 3.50" tall — 18" rim diameter

For the older Imperial Low Profile series the Aspect Ratio was 90% but as the widths of the tyres were unique, it was not shown. Where the tyre width was not unique, or where the Aspect Ratio was not 90%, the actual Aspect Ratio was shown.

For example:

4.10 x 19, where 4.10 is a unique width
4.10" wide $4.10 \times 90\% = 3.7"$ tall — 19" rim diameter
4.25/85-18, Where 4.25 is not a unique width and the Aspect Ratio is not 90%
4.25" wide $4.25 \times 85\% = 3.6"$ tall — 18" rim diameter

Perhaps the most easily understood size markings are the modern millimetric type.

For example:

110/90-18
110 mm wide $110 \times 90\% = 99$ mm tall — 18" rim diameter

Although the mixing of Metric and Imperial units can, even in this case, cause some confusion.

The effect of changing the Aspect Ratio is to change the overall diameter of the tyre:

$$D = W \times Ar \times 2 + (25.4 \times dr)$$

Therefore:

120/100-18 $D = 120 \times 100\% \times 2 + (25.4 \times 18) = 697.2$ mm
120/90-18 $D = 120 \times 90\% \times 2 + (25.4 \times 18) = 673.2$ mm
120/80-18 $D = 120 \times 80\% \times 2 + (25.4 \times 18) = 649.2$ mm

Each of these tyres is 120 mm wide and fitted on an 18" rim but as you can see there is a significant difference in the overall diameters.
